FOR IMMEDIATE RELEASE

MachLink High-Speed Internet Email Upgrade Completion

MachLink high-speed Internet email users are experiencing enhanced services since the system upgrade was completed in March.

The upgrade began in 2010 and required customers to take steps within their own computer systems to manually change the inbound and outbound server names. That initiative led to greater email opportunities for MachLink customers.

The following enhanced features are now available with MachLink email:

- Advanced user-friendly interface
- Enhanced reliability
- Faster speeds
- 2 GB of storage space
- Improved support for mobile device usage
- Automatic notifications when the storage space is nearing its quota
- Automatic trash disposal after 30 days

For more information about MachLink and how to set up your email settings, call us at 263-2631 or visit www.mpw.org.

MachLink is a product of Muscatine Power and Water, Your Reliable Neighbor.
